Agrees with staff report about Marin Catholic lights

I am writing to express my support for the planning staff recommendation that the Marin Catholic High School proposal for night lights on their playing field be rejected by the Planning Commission.

I agree with the staff report that the total impact of the project is a strong reason for rejecting the project. They list the project's impacts on light, contrast and glare in the area around the project, including the Corte Madera Creek wetlands, the nighttime noise and the traffic impact.

The planning staff should be thanked for providing a thorough review of the studies of the impact of this project on the local community.

It is important that our public agencies make decisions based on what the data shows, and in this case the data overwhelmingly shows this project is inappropriate for this area.
