

## Light, noise and traffic enough to reject field plan

The proposed LED lighting of Marin Catholic High School's athletic field is wrong for the local community.

The three primary problems are light pollution, noise pollution and traffic congestion.

The private school wants to use the field for night games and practices for football, but also men's and women's soccer. It is anticipated the field would be used over 500 times a year.

The combination of extremely bright lights and excessive noise would be enough to be against this project.

However, the biggest concern I have is traffic. It is estimated that over 700 cars would be going to the games and leaving the games.

Sir Francis Drake Boulevard is already congested in the morning and evening commute. The road is impacted when schools start and let out.

Adding over 700 cars to that single road would create a nightmare for local residents. The lighting of their athletic field would add nothing to the betterment of our area and would only increase noise and traffic problems.

I sincerely hope Marin supervisors reject this project as self-serving and not in the interest of the greater community.
